

EPST Purchases AMST-Built AMO Flight Simulator

Utrecht/Nieuw-Vennep, June 2026 – European Pilot Selection and Training B.V. (EPST) located in Utrecht, The Netherlands, has purchased an AMO PILOTS Automatic Flight Performance Monitoring system for pilot selection from AMST-Aviation B.V. located in Nieuw-Vennep, The Netherlands.

With the purchase, EPST is expanding its pilot selection capabilities in pursuit of true evidence-based selection using ICAO behavior markers.

Eric Duijkers, CEO of EPST: “We are excited to have this latest addition to our selection and training tools. The AMO enables us to further expand our pilot selection services in support of our airline partners in search of aircrews. We are delighted to capitalize on our relationship with AMST and look forward to further expand our relationship with AMST in the near future.”

Marijn Laagewaard, Sales Director AMST: “We are proud to welcome EPST as our newest AMO customer. EPST’s commitment to evidence-based pilot selection perfectly aligns with the capabilities our AMO platform was designed to deliver. This partnership reflects our shared dedication to raising the standard of pilot assessment across the aviation industry, and we look forward to growing our collaboration with EPST in the years ahead.”

About European Pilot Selection & Training (EPST)

European Pilot Selection & Training (EPST) founded in 1997, is an Approved Training Organisation (ATO NL-37) under EASA regulations to provide solutions in terms of ab-initio pilot training, advanced pilot training programs, pilot recruitment and pilot selection services. EPST operates B737 and A320 simulators, all fully EASA qualified FTD devices.

About AMST:

AMST is a manufacturer of advanced flight simulation systems for civil and military aviation, with more than 40 years of experience. Its portfolio ranges from generic and mission training devices to type specific Level D Full Flight Simulators (FFS), and includes solutions for pilot selection, supported by leading expertise in human factors and high-fidelity visual systems powered by VISIM IG.
